Art Unit: 1745

### **DETAILED ACTION**

### **Priority**

1. Acknowledgment is made of applicant's claim for foreign priority based on an application filed in Germany on 9/19/02. It is noted, however, that applicant has not filed a certified copy of the DE 10243592 application as required by 35 U.S.C. 119(b).

# Claim Rejections - 35 USC § 112

- 2. The following is a quotation of the second paragraph of 35 U.S.C. 112:
  - The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 3. Claim 11 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 11 recites "A polymer blend as defined in claim 1," however, claim 1 is directed to a bipolar plate. Correction is required.

# Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are

Art Unit: 1745

such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

5. Claims 1-5, 8, and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over WO 00/68299.

The reference is directed to conductive compositions with compositionally controlled bulk resistivity. The composition comprises two nonmiscible polymers forming a dispersed phase and a continuous phase (see abstract). The composition further contains a carbon filler (fibrils or carbon black) in an amount of up to 3 wt% (see page 3, line 15). The concentration of carbon black is higher in the continuous phase, which is polyamide (see page 8, line 3).

The reference does not expressly teach that the composition is formed into a bipolar plate usable in a PEM fuel cell, as recited in claim 1. Further, the reference does not expressly teach the weight percentages recited in claims 3 and 4.

However, the invention as a whole would have been obvious to one of ordinary skill in the art at the time the invention was made because the formation of the composition into a plate shape usable in a fuel cell would be obvious to a skilled artisan. It is noted that at page 2, line 12, the reference discloses "plastic panels." Such disclosure suggests that the composition is formed into a plate shape, and such a plate would also be capable of being used in a PEM fuel cell. Furthermore, a change in shape is generally not sufficient to patentably distinguish over the prior art (MPEP 2144.04).

In addition the artisan would be sufficiently skilled to increase the total amount of carbon fillers in the composition to decrease resistance, and also to manipulate the relative amounts of carbon black and carbon fibers. It has been held that the discovery of an optimum value of a

Art Unit: 1745

result effective variable in a known process is ordinarily within the skill of the art. *In re Boesch*, 205 USPQ 215 (CCPA 1980).

# Allowable Subject Matter

- 6. Claims 6, 7 and 9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 7. The following is a statement of reasons for the indication of allowable subject matter:

  Claim 9 recites a PEM fuel cell comprising bipolar plates having the specified

  composition. WO '299 does not teach or fairly suggest the presence of a PEM fuel cell.

Claim 6 recites that the polymer blend includes a polyamide and at least one polyether ketone or polyether sulfone. WO '299 does not teach or fairly suggest the use of a polyether ketone or polyether sulfone.

#### Conclusion

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jonathan Crepeau whose telephone number is (571) 272-1299. The examiner can normally be reached Monday-Friday from 9:30 AM - 6:00 PM EST.

Art Unit: 1745

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Patrick Ryan, can be reached at (571) 272-1292. The phone number for the organization where this application or proceeding is assigned is (571) 272-1700. Documents may be faxed to the central fax server at (571) 273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
